

Authorised pre-treatment products for commercial processes

The following pages contain a list of grease traps, grease extractors, oil water separators, and other trade wastewater pre-treatment products that comply with Sydney Water's requirements for commercial trade wastewater pre-treatment. Sydney Water does not authorise installers. Installation can be arranged by a licensed plumber in accordance with AS3500.

▪ Introduction	Page 1
▪ Grease traps and grease extractors	Page 2 and 3
▪ Oily water separators	Page 4
▪ Other pre-treatment products	Page 5 and 6

- **BEFORE PURCHASING OR INSTALLATION COMMENCES**, please contact your local trade waste Customer Service Representative who will ensure the correct and most suitable pre-treatment is selected for your process/es.
- Sydney Water requires that before any filter grease unit is installed (as indicated by an asterisk * on the following pages), the customer must provide a report by a hydraulic consultant that demonstrates that a 1,000 L grease trap cannot be installed.
- For assistance, email us at tradewaste@sydneywater.com.au
- Installation of pre-treatment products must meet Australian Standards, Occupational Health and Safety standards and Sydney Water guidelines. Pre-treatment installed in Sydney Water's area of operations not meeting these standards and guidelines will be required to be removed at the cost of the installer.
- Only products currently authorised for installation in Sydney Water's area of operations will be permitted.
- Installation of pre-treatment in Sydney Water's area of operations is permitted on the condition that height clearance above the top of the installed pre-treatment is at least equal to the depth of the deepest part of the pre-treatment. This will ensure ease and safe access for cleaning and inspection of the pre-treatment.
- Only the lids or covers for the applicable installation are to be used (as specified by the manufacturer). The lids or covers must meet current Australian Standards, Occupational Health and Safety standards and Sydney Water guidelines.
- Stands, walkways and steps must meet Australian Standards, Occupational Health and Safety Guidelines.
- If you are a manufacturer of trade wastewater pre-treatment products and require information on how to have your products included on this list, please email: tradewaste@sydneywater.com.au
- Additional information may be obtained from our web site, www.sydneywater.com.au
- Sydney Water does not provide assurance that these products will be accepted for installation by other water authorities or councils outside Sydney Water's area of operation.

MATERIAL CODE	
C	Concrete/reinforced precast (must be epoxy coated internally)
SS	Stainless steel
G	Glass reinforced concrete (must be epoxy coated internally)
GRP	Glass reinforced plastic (Fibreglass)
M	Epoxy coated mild steel
P	Polyethylene/Polypropylene

PRODUCT CODE	
CPI	Coalescing plate interceptor
CPS	Corrugated plate separator
OWS	Oil water separator
VGS	Vertical Gravity Separator (both oily & greasy waste)
kL/h	Kilolitre per hour
SCD	Surge Control Device
