Stainless Steel Baffle Grease Filter, 495mm x 495mm x 45mm

PART No: FB45-495X495SS

FEATURES

Baffle filters were designed primarily in response to a National Fire Protection Agency report attributing most fires
in commercial kitchens being caused by cooking flames that flare up and penetrate mesh filters where grease
deposits had accumulated.

Colour: Stainless steel

Material: Stainless Steel (304)

ADDITIONAL INFORMATION

Multi Action Safety Features Baffle filters provide safe and dependable proven barrier protection. Baffle filters provide efficient and proven grease removal. Baffle filters will not allow grease build up. The high velocity air flow provides a "self-cleaning" action. Special openings allow grease to continually drain and run off from filter. Improved Air Balance The filter design provides a self balancing air flow through each filter allowing filter positioning to provide a good capture velocity where it is required using considerably less volume of exhaust air. With low pressure drop filters it is necessary to pull more air through the central filters to get good smoke and grease velocity at the ends of the canopy. Handles are included.
