H.B. Fuller Heat Resistant Silicone - Red

PART No: FULLER-HI-TEMP

FEATURES

H.B. Fuller Heat Resistant Silicone - Red

FulaSeal PRO™ 260 is a high-performance RTV silicone adhesive/sealant designed for applications requiring exceptional heat resistance. It delivers continuous temperature performance up to 260°C and can tolerate intermittent exposure up to 312°C. Ideal for a wide range of industrial bonding and sealing tasks where durability and thermal stability are essential.

Suitable for sealing industrial ovens and forming gaskets.

Key Benefits:

- Industrial-grade silicone designed for high-temperature sealing and bonding
- Withstands temperatures up to 312°C (intermittent)
- Fast-curing acetic formula
- Maintains long-term flexibility with ±25% joint movement
- Excellent durability against UV, weathering, and ageing
- Resists vibration and mechanical stress
- High tensile strength for robust performance

Uses:

- General-purpose industrial sealing and bonding
- High-temperature sealing for ovens, flues, chimneys, and ducting
- Creating in-place gaskets for engines and other heat-exposed equipment
- Forming durable, heat-resistant gaskets for industrial applications

ADDITIONAL INFORMATION

Substrate Compatibility:

- Ceramic surfaces
- Glass
- Stainless and mild steel
- Aluminium
- Fibreglass
- Timber and wood-based materials
